

Pro-card of AEO Power ESC

Model : Pro-card for Power Series ESC

It only can work with AEO Power series ESC Size:87mm x 52mm x 2mm

Weight : 17g

The Pro-card has electric throttle function, you can use the card as transmitter throttle to drive the ESC, or simulate the stick of the radio to test servo. So It's really a nice products.

Settings of ESC functions : Plug the ESC signal wire into the corresponding connector of the card, and then connect ESC with battery ,the light %signal+pro-card will be on ,It means the card is reading the data of the ESC , when it finished, the card will display your current setting of the ESC , now you can setup your ESC with the button %up down+and %left right+ If the settings are completed, press +ok+button.

Electric throttle function : Connect the signal wire of ESC to the pro-card(or you can use 4.5V-5.5V power) , then keep pressing %ok+ button+ , connect ESC power , after 3 seconds %LI+light will be on , now the electric throttle at lowest position ,If the ESC is connecting with a motor, you will hear %beep beep+then you can control the throttle by the button %up down and left right+
